

Washington, D. C.

September 12, 1947

FARM EMPLOYMENT UNCHANGED

About 11 million persons were working on farms on September 1, the same as a year ago, the Bureau of Agricultural Economics reported today. There were slightly fewer family workers engaged in farm work but a few more hired farm workers. There was no seasonal change in farm employment during August for the country as a whole. Usually August shows a moderate increase.

The trend toward a shorter farm work-day continued. There has been a slight decline in the length of the average work-day for September 1 every year since 1943, the first year of the continuous series. From 1943 to 1947 the work-day of farm operators has decreased one hour while that of hired workers has dropped a little more than half an hour.

Farm work during the last week of August was proceeding satisfactorily with interference from rain in only a few areas. Most crops were later than usual east of the Rocky Mountains, but in the Pacific Coast States they were from one to three weeks early. Small grain harvest was nearly complete except in the Central Mountain States and the Northern Border States. Preparations for fall plantings were making good progress in many areas but in some sections were delayed because of dry soil. Cotton was being picked in California, Arizona, and the far South. Vegetables and fruits were being harvested in most parts of the country. Tobacco harvest was underway in North Carolina and starting in the Burley area.

Supplies of seasonal labor were generally adequate to handle all work on time during the current season. Occasionally, unusual weather or other exceptional conditions have placed a strain on labor supplies in small areas.

Total employment remained about the same on September 1 as a year ago for the entire country and also in the Middle Atlantic and East North Central regions. In the West North Central, the South Atlantic, and the Mountain States there were 3 to 5 percent more persons working than a year ago. Most of the increase was due to the difference in crop progress during the season. Small grain harvest in the West North Central and Mountain States and tobacco harvest in North Carolina were later than last year. Smaller numbers of farm workers in the South Central and Pacific States were also due to crop progress.

New England, on September 1, had about equal increases from last year in family and hired workers. The number of family workers decreased about the usual slight seasonal amount from August 1, compared with an increase during August

last year. The number of hired workers dropped about a fifth during August which was almost twice as much as usual but about the same as in the two previous years. Summer harvest operations were about completed with only a small amount of hay to make. Silo filling was starting in the southern part of the region.

The number of family workers and the number of hired workers in the Middle Atlantic States were less on September 1 than a month earlier with about usual seasonal decreases. There were about the same number of family workers and of hired hands as a year ago. Small grains were practically all harvested but there was still some hay to make. Preparations for seeding of winter grains were underway in all States of the region. In New York, vegetable harvest was approaching a peak and harvest of early peaches and apples was getting underway. The Long Island potato harvest was making usual progress. Potatoes, apples and peaches were also being harvested in central New Jersey. In South Jersey harvest of tomatoes and lima beans were major jobs as well as the cultivation of fall truck crops.

The number of hired farm workers in the East North Central States on September 1 was slightly larger than a year ago, after a usual seasonal decrease during August. The number of family workers declined the usual amount from August 1 but totaled about the same as last year. Harvest of small grains was completed except in northern Wisconsin and northern Michigan. Plowing and preparations for seeding fall grains were proceeding in most of the region except in some areas where the soil was too dry. Harvest of peaches and early apples was starting in northern Ohio and in the Michigan fruit areas. In Illinois, harvests of tomatoes and sweet corn for canning were of some importance in the central and north sections of the State.

There were 14 percent more hired workers in the West North Central States on September 1 than last year, largely because small grain harvest is later this year. Hired employment increased slightly from August 1 compared with a usual decrease. There were a few more family workers than a year ago after a seasonal decrease a bit larger than usual. Harvest of small grains was still underway in Minnesota and North and South Dakota. Combining was generally completed but threshing from shock was just getting underway in northern South Dakota and central North Dakota. Harvest of the commercial potato crop in North Dakota was also starting. In Kansas, a heavy crop of prairie hay was being put up in the south and southeastern sections of the State. Plowing for fall planting of small grains was in progress in most of the region where it was not too dry. In western Kansas some wheat was being sown.

In the South Atlantic States there were a few more workers on September 1 than a year ago. The percentage increase was the same for family workers and for hired workers. There was very little seasonal change from August 1 to September 1 in the number of either family or hired workers. The seasonal change was nearer normal this year than last but still short of the usual sizeable increase in family and hired employment during August. Cotton crops for this year and last have been late and cotton picking less advanced than usual. Cotton picking was well advanced in south Georgia and getting started in the central part of the State and in southern South Carolina. Tobacco was being harvested in North Carolina and Virginia but the crop was maturing late. In Florida, corn was being harvested and peanuts and some sweet potatoes were being dug. Peach harvest was at its peak in the Shenandoah Valley section of

Virginia and West Virginia. Tomato harvest on the Eastern Shore of Maryland and Virginia was using a considerable amount of migrant seasonal labor.

In the East South Central States the number of family workers increased less than usual during August and on September 1 was 5 percent less than a year ago. The number of hired workers increased much more than usual during August but hired employment on September 1 was the same as a year ago. Cotton was being picked in southern Alabama and Mississippi. The burley tobacco crop in Tennessee and Kentucky, which is largely harvested by family labor, was late and harvest only beginning. Late hay was being cut in most of the region and preparations were underway for fall seeding of grains and cover crops.

Hired farm workers in the West South Central States on September 1 totaled 9 percent more than a year ago, an increase exceeded in only the West North Central States. However, hired employment declined a little seasonally. The number of family workers was considerably lower than a year ago after a greater than usual decrease from August 1. Cotton harvest was in full swing in southern Texas with gins reported operating 24 hours per day. Harvest of corn and grain sorghums was also in progress in all parts of Texas except in the north. Peanut harvest was extending to the north-central counties. In southern Texas, fall vegetables were being planted and preparations for winter vegetables were underway. Rice was being harvested in Texas, Louisiana and Arkansas. Cotton picking was making slow progress in Louisiana. In Oklahoma major jobs were harvest of hay, broomcorn, grain sorghums, corn and crops for silage and preparations for planting fall grains.

In the Mountain States the number of hired workers increased sharply from August 1. The increase was considerably larger than the average for recent years. The number of hired workers on September 1 was 5 percent larger than a year ago. The number of family workers increased by the same amount over last year, but with little change from August 1. Grain harvest was moving toward completion in the northern States of the region. In the same States preparations were also being made for sowing fall grains. In southwestern Idaho peaches were about half harvested and prune harvest started. Dry onions and canning corn were also being harvested. Peaches and pears were being picked in Utah. Cotton picking was started in Arizona and seed beds were being prepared for winter vegetables.

In the Pacific States hired employment and family employment on September 1 were down from a year ago, largely because of an earlier than usual season. Seasonally, the number of family workers increased about the usual amount but the August increase in the number of hired workers was less than a third the average for recent years. In California the usual harvest of vegetables in season was underway. Planting, irrigation and cultivation of later truck crops was also in progress. Fruit being harvested included citrus, peaches for market and canning, apples, figs and grapes. In addition hops, sugar beets, potatoes and hay were also being harvested. In Oregon harvests of grain, peaches, Bartlett pears and prunes were about over. Fall and winter pear harvest was starting. Grain and dry pea harvest was practically over in eastern Washington and apple harvest was getting underway. In western Washington some of the principal jobs were grain and hay harvest and harvest of blackberries, green beans, sweet corn, tomatoes and other fall truck crops.
